Accessing Drug
Information,
One Tap at a Time:
DrugXafe Mobile App

The DrugXafe Mobile App provides users with convenient access to drug information. By scanning the 2D Data Matrix on medication boxes, users can easily obtain details such as approval and recall status, expiration date and price of drugs.

What are the benefits of DrugXafe Mobile App?

- Drug Safety
- Pharmacy Location Finder
- Current Price of Drug
- Adverse Reaction Reporting
- Prospectus Information
- Recall Alerts
- Side Effect Notification
- Drug Information

But who constitutes the stakeholders and what mechanisms are in place for their coordination?

Patients

Safe Medicines

Ensures that every medication is authenticated and safe for consumption.

Find Pharmacies

Quickly locate the nearest pharmacy with the medications needed.

Expiration Date Management

Up-to-date and accurate information about the date of use of medicines.

Adverse Reaction Notification

Reporting any adverse reactions or side effects experienced from medication use.

Healthcare Systems, Providers and Authorities

Recall Notices

Ensures rapid dissemination of drug recall information to prevent harm.

Adverse Event Monitoring

Enables real-time monitoring of adverse drug reactions for health authorities and administrators to monitor population health.

Regulate Medications

Assists in enforcing medication compliance and safety regulations efficiently.

Safe Medicines

Ensures a safe drug ecosystem by providing a control mechanism for medicines accessed by patients.

Tiga is the first company in the world to implement an end-to-end drug tracking and tracing system and DrugXafe Mobile App works by using the data and information on this system.

The app offers a feature that allows users to scan the Data Matrix code found on drug packaging, instantly verifying the medication's current status. This includes checking for expiration dates, recall information and whether the drug is safe for use.

Also, it serves as a crucial tool for drug safety monitoring, enabling users to report any adverse reactions or side effects experienced from medication use directly through the app.

DrugXafe Mobile App fully works integrated with the DrugXafe- Pharmaceutical Track and Trace System, which has been recognized as 'Best Practice in the Pharma Industry' by the independent organization PwC and has been awarded twice by WSIS and receives all information from DrugXafe. It collaborates with health authorities such as ministries of Health, drug authorities and regulators, also pharmaceutical supply chain shareholders to ensure drug safety and traceability.

In three countries, we have successfully provided DrugXafe, the first system capable of end-to-end tracking. It has already been trusted by over 65,000 stakeholders, including pharmacies, consumption centers, manufacturers, wholesalers and reimbursement institutions.

But how?

Let's break it down with figures;

30K+
Pharmacies

425
Manufacturers

711
Wholesalers

20K+
Consumption Centers

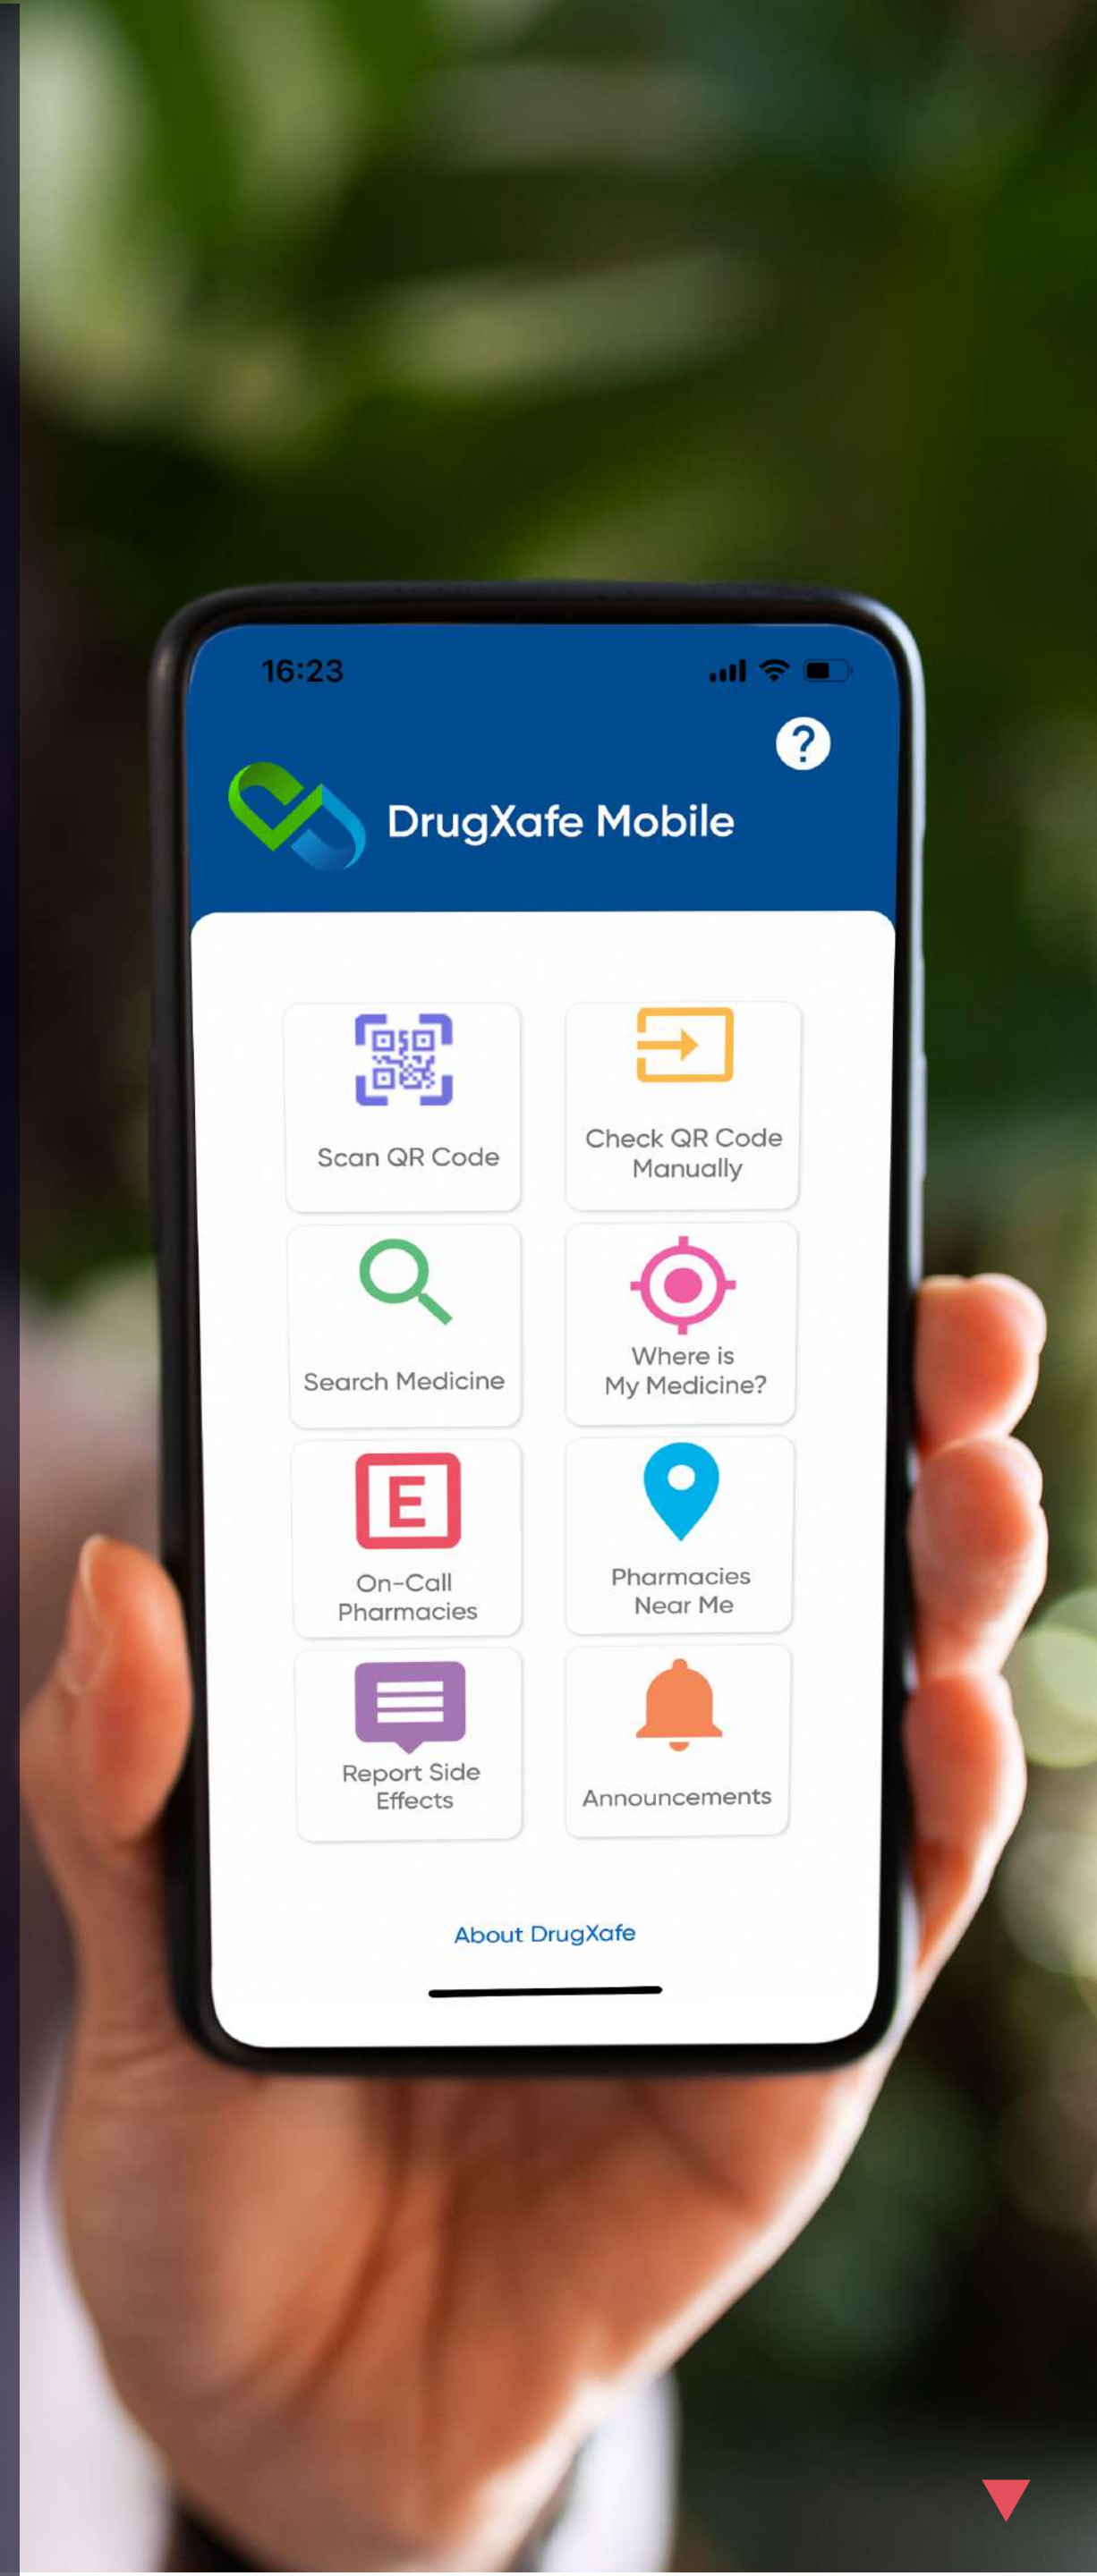

58
Exporters

50
Reimbursement Institutions

160K+
DrugXafe Mobile App User

And Why Are We Doing This?

Because we understand the critical importance of medications for healthcare and treatment. Therefore, with a patient-centered approach, we strive to ensure that medications reach patients safely and improve the healthcare ecosystem,
shaping the future together as always!
